

AUTO-FILLING SENSOR

The auto-filling systems connected to the output of a water purifier allows to fill a tank and to stop automatically when the tank is full of demineralised water.

This can be used directly on the watertank of a chemistry analyser, avoiding the need to fill manually, with the consequence to stop momentarily the instrument.

The **new auto-filling sensor** designed by DiaSys can be connected between to any type of water purifier, to feed a watertank of a chemistry analyser.

specifications :

- universal power supply wallplug 110V-220V
- plunger height : 275 mm
- tank neck diameter : 35 to 41 mm

It fits perfectly with DiaSys Respons 920 and DiaSys Respons 940 watertanks.
